

BREATHE YOURSELF HEALTHY

LET YOURSELF BREATHE FREELY...?
LET YOUR BODY BREATHE FREELY!

AIRNERGY+[®]
ENERGY FROM INSIDE

How we think and feel

Airnergy - knowing, doing, helping.

Quality rather than quantity.

When people still thought that the Earth was flat, this was regarded as fact. Once people discovered that it was round, this fact became a belief.

A fact is a fact until a new step shows that it was only a belief. That is the pattern of history. We all concurred and then took a new step.

And this is how we were able to prove for the first time in a measurable way that it is not the quantity of oxygen (increased oxygen supply as in previous oxygen therapies), but how it is used in the body that is the determining factor. A step from quantity over to quality. With oxygen as the basis for regeneration. And indeed without adding any other substance, without more oxygen, without ionization or ozone. In the form of respiratory air and in a device that is accessible to everyone.¹

Health Care and Prevention.

And we are particularly thrilled to be doing this at a time when resources are shrinking and self responsibility is increasing:

health care and prevention as a commodity that is attainable by everyone.

And so we hope that with our small revolution we are helping to make health prevention more universally available.

Making health prevention universally available.

What do you mean?

"Who can afford such a device?" you might ask.

Apart from the fact that there are numerous public Airnergy spas and corporate health prevention programmes, unfortunately at the moment our response is: Even we cannot produce a car for the price of a bicycle.

But we would like to remind you of what people do in difficult times – they group together: not only in families but also in neighbourhood and friendship groups, in sports and fitness clubs and in self-help groups.

Perhaps with your help we can contribute in this way towards something which initially might sound rather utopian but is, after all, for the greater good.

A company promotes energy from inside.

More than 15 years ago our researchers discovered the key to the Airnergy principle. Over many years our scientific experts developed the technology so that breathing Airnergy can be an everyday experience.

For prevention: Energy from inside.

Since 1994 the figures for employee absences have increased by 80%.

This is due to functional disturbances: the immune system and nervous system must be supported, the blood vessels protected, metabolic processes and sleep optimized.

And mostly after the age of 40. If you do nothing about it, then 10 to 20 years down the line: "Now something has to be done ... drugs, operations."... to put something right and then it is usually too late.

So-called psycho-neuro-endocrino-immunological regulation is vitally important in preventing functional disorders and stopping them from becoming chronic. It is this regulation that is kept in balance by Airnergy Spirovital therapy. (For further information: page 25)

To age better: Energy from inside.

Advances in medical science have meant that people are living longer and longer. It is therefore all the more important to enjoy the second half of one's life without any loss of health or vitality. The Airnergy Spirovital method can help

to keep illnesses at bay and to minimize their duration and effects.

Since the body then uses up less energy to restore itself, more energy is available for enjoying life.

This can include: regulation of metabolism, cell production and protection, strengthening the heart, reducing wrinkles, enhancing brain metabolism. Similarly secondary diseases and accompanying symptoms can be minimized. But primarily Airnergy Spirovital therapy helps with autonomic disorders and usually after only a short period of treatment. Because it can affect emotional factors such as feelings of self-worth, experiencing joy and happiness and motivation, it creates a positive foundation for subsequent organic changes.

To increase performance: Energy from inside.

Sport is more or less a metaphor for our universally performance-driven society. Competitive sportsmen and women are faced with an additional problem:

**Today you will find Airnergy in the luggage of a world-famous pianist, a singer...
Airnergy travels with Formula 1 racing drivers, is used in doctors' practices and clinics,
in the manager's office, in the living room, in beauty institutes and spas.**

Oxygen is required for energy production in more than 60 billion cells in the body at every moment of our life. Athletes in particular have found that after intensive training they go into a phase of overtraining (oxidative stress) and can easily pick up infections.

The reason: Competitive sport weakens the immune system leading to increased susceptibility to infections. The emotional stress experienced by sportsmen and women, for example before a competition, also affects the immune system.

The optimum utilization of the oxygen in the air is therefore of prime importance for maintaining health and increasing performance in all sporting activities, whether these be competitive or recreational.

In competitive sport the Airnergy Spirovital method has a particularly beneficial effect upon the ability to concentrate. This is especially true in motor sport. And in endurance sports such as marathon running and triathlons Airnergy can help to increase endurance and enhance and accelerate recovery.

The optimum utilization of oxygen from the air is generally beneficial:

- better oxygen utilization
- increased energy production (ATP) in the cells
- reduced lactate production (lactic acid)
- much faster recovery
- reduced exposure to free (oxygen) radicals
- stimulation of self-healing processes
- improved concentration
- up to 10% lower resting pulse rate

not associated with any risks all side-effects -
not regarded as doping*

*According to the certificate from the National Anti-Doping Agency (NADA) dated 18.12.2008

Active ingredient: The air we breathe

Since we cannot change the body, we change the air we breathe*.

75% of the air we breathe in is breathed out again used.

Without water or food a person could last for days or even weeks but without oxygen they would only last a few minutes.

Over 24 hours each person "breathes" around 400 litres of oxygen at rest and considerably more during physical exertion.

This means that human beings are relatively inefficient "air users". Of the 21% of oxygen contained in the atmosphere, the human organism can only use approximately 25%. 75% is exhaled again unused – the reason why mouth-to-mouth resuscitation works.

The weaker or older a body is, the less oxygen it can use.

And the body's ability to utilize oxygen optimally is further impaired by increasing age, illness, stress, lack of exercise, poor nutrition and environmental pollution.

And each of the 60 billion cells in the body needs oxygen to produce energy at every moment of our lives. It is needed to regulate up to 1,000 million chemical reactions in the cells every second.

The weak point in the system is therefore not the supply of oxygen or its concentration but rather the body's ability to make use of the abundant supply of oxygen in its cells. It therefore makes little sense to increase the supply of oxygen even further.

The solution: Quality rather than quantity.

Not to increase the quantity of oxygen supplied to the body but instead to make the existing oxygen more readily utilizable by the body.

Here is a simple comparison from technology: A poorly calibrated combustion engine creates a lot of harmful emissions, operates at reduced power and has a shorter service life. These problems cannot be solved by giving it more fuel.

Only optimal combustion can improve its output, reduce harmful emissions and guarantee a long service life.

*The oxygen is not increased, ionized or supplemented with ozone.

Via a technology that follows nature's example

The Airnergy technology uses one of nature's vital processes that has existed for millions of years, e.g. in photosynthesis in green leaves.

In this process oxygen is activated in such a way that the body recognises it.

Just as water has different properties when it is hot or cold, oxygen also has different properties.

Hot water dissolves substances such as sugar or salt crystals, quickly and in large quantities – hot water is reactive. Cold water only dissolves these substances slowly and in small quantities – cold water is unreactive.

The different properties of oxygen:

The oxygen that is present in the atmosphere is unreactive. In order to be able to utilize this oxygen for energy production, the body first of all has to convert it into its reactive state, the singlet state.

However, if the body loses some of its ability to do this (cf. page 7) it needs new energy to be able to restore its functional capacity and thereby its powers of selfhealing and regeneration.

Airnergy helps the body in a natural way to optimize this energy for oxygen utilization in the cells.

And this is how the new respiratory air technology works:

The Airnergy device constantly converts oxygen from the air into its high-energy stage (singlet oxygen) – the physiologically active, reactive form of oxygen that the body recognizes.

This is done using a patented method that technically simulates the natural processes of photosynthesis in green leaves.

Whilst still in the Airnergy device the short-lived, reactive singlet oxygen decays within a fraction of a millisecond and reverts to its basic state, thereby releasing energy that the body knows and loves.

The water molecules in the air take up this energy, which can then be inhaled with the normal air via a comfortable nasal cannula.

The "Airnergy energy" brings about a measurable improvement in oxygen utilization in the organism and has a beneficial effect upon many of the body's functions. Without supplying extra oxygen and without any foreign substances.

Breathe yourself healthy: Make better use of the air you breathe

The essential way in which Airnergy works is to improve oxygen utilization and self-regulation.²

Whether you are old, stressed or ill - improving oxygen utilization benefits the whole body.

The inherent ability of the body to utilize oxygen deteriorates with age, under the effects of stress or sleep disturbances, environmental pollution, many chronic diseases and mood disorders. The metabolism starts to run on "economy": and this explains why Airnergy can be beneficial for nearly all diseases and for prevention.

Breathing Airnergy helps the body to once again make better use of the potential energy of the inhaled air, not only during the 20 minutes of the treatment.

Airnergy's holistic approach.

And this is the key to Airnergy's holistic approach: Its unique action can only be explained by the biological significance of the body's inherent ability to use oxygen for regeneration in general.

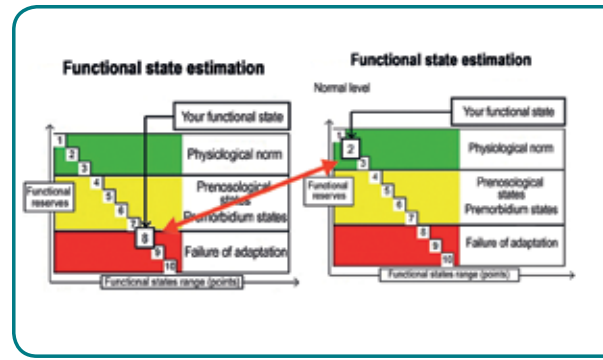

Inhaling Airnergy on a regular basis enhances this innate capacity to regenerate, strengthens the immune system, optimizes metabolism and increases vitality and joie-de-vivre.

This technological innovation has a beneficial effect upon the whole organism.

Possible applications of Airnergy:

Poor concentration, exhaustion, difficulty falling asleep and sleeping through, chronic fatigue, burnout, sleep apnoea, jetlag, circulatory problems, high blood-pressure, cardiovascular diseases, high cholesterol, tinnitus, bronchitis, chronic sinusitis, diabetes mellitus, multiple chemical syndrome (MCS), chronic fibromyalgia, rheumatic diseases, acute and chronic pain, liver problems, hormonal imbalance, skin diseases, allergies, visual disturbances, age-related diseases (Parkinson's, Alzheimer's) etc.³

The effects are measurable

Often Airnergy users can subjectively feel the beneficial effects even after a short time.
But the effects are also proven objectively by a whole series of study results.

The effect: the less oxygen that is exhaled, the more is used in the body.

In a trial healthy volunteers breathed respiratory air, that had been processed using Airnergy technology, for 20 minutes. The researchers were able to identify clear significant improvements:

- significant reduction in the amount of oxygen in the exhaled air
- significant improvement in the exhalation capacity of the volunteers (Peak-Flow)
- significant reduction in breathing and pulse rate

These are clear indications of improved oxygen utilization. However, these same volunteers did not benefit from a treatment with concentrated oxygen carried out under the same conditions¹ (cf. also Page 15).

In several other studies the researchers looked at the use of Airnergy for sleep apnoea. This showed that around 82% of patients experience a significant improvement in their general state of health and in their particular condition.⁴

The effect upon the autonomic nervous system is proven.

In order to demonstrate the effect of Airnergy upon the autonomic nervous system, another study group worked with the parameter of heart rate variability (HRV). Cardiac activity is directly linked to the autonomic nervous system.

By measuring the variability of the intervals between heartbeats (HRV), one obtains values to indicate the regulating capacity of the autonomic nervous system.

The researchers' opinion: "Airnergy results in an objectively measurable improvement in the energy balance in the organism."⁵ "This is because the supply of energy to the cells is directly optimized by the rapid formation of free energy valences so that cellular activity (regeneration or renewal) is also directly stimulated."⁶

Further medical trials have been carried out.

The medical and scientific compendium can be requested by expert medical groups.

Comparison: Airnergy Spirovital therapy versus oxygen therapy

The following comparison relates to use in the prevention and treatment of chronic diseases.

Airnergy Spirovital therapy	Oxygen therapy
+ Breathing air with a natural oxygen content of 21 %	Administration of concentrated oxygen up to 100 % via respiration or i. m. injection
+ Increase in long-term energy production = ATP*	+ Increase in short-term energy production = ATP*
+ Increase in cellular oxygen utilization	⚠ Breaks through the natural oxygen threshold (natural barrier against O ₂ -radical formation)
+ Enhanced cellular protection from the harmful effects of increased free radical formation by increasing the antioxidative capacity of intra and extracellular DNA** - protection	⚠ Increase in oxidative stress, increased production of free radicals, especially intracellularly, can lead to DNA** damage

*ATP = adenosine triphosphate is the universal form of directly available energy in each cell and is at the same time an important regulator of energy supply processes.

**DNA = deoxyribonucleic acid is a biomolecule that is present in all living things and the carrier of genetic information.

In emergency and intensive medicine the administration of oxygen is of course important for maintaining or saving life. In this case the side effects of increased O₂-supply must be tolerated.

You can feel the effects...

At the Airnergy headquarters we receive letters nearly every day from enthusiastic users who would no longer be without their Airnergy treatments and who sometimes describe impressive improvements in their wellbeing and state of health.

Patients, doctors, competitive sportsmen, trainers, company directors, public figures. These include patients who are using energy for chronic diseases; doctors, who are successfully offering inhalation therapy in their practices; competitive sportsmen who have been able to enhance their performance using this technology; trainers who supplement their training programme with this treatment; company directors who use Airnergy to increase the output and wellbeing of their staff.

"For several years now Airnergy has been part of my daily routine - like cleaning my teeth and having a shower [...] Airnergy has the paradoxical effect of energizing and calming at the same time. [...] It is a really exciting and invigorating device that I would no longer be without. I am a self-confessed Airnergy addict." **Herbert Grönemeyer, German music producer, singer and actor**

"This new basic therapy [...] is gaining increasing recognition - even in conventional medical circles - as a supplementary treatment, for pre-and post treatment, to offset adverse side-effects of interventions and above all to support conventional methods." **Univ. Prof. Dr. med. Klaus Jung, Doctor of Internal Medicine, Sports Medicine Naturopathy, Gleiszellen-Gleishorbach**

"My experiences with this therapy have all been positive. Again and again patients report that they feel better and stronger after a course of Airnergy treatments. I have many patients who have been having regular treatments once or twice a week for up to 20 treatments for many years now and who swear by the therapy."

Dr. med. Roger Eisen, Specialist in Internal Medicine, General Medicine, Naturopathy, Sports Medicine, Bad Griesbach

"We would no longer do without the energy method because of the many good experiences with it" ⁷ [...] "It has significantly improved sleep disorders and brought about improvements in motivation and concentration. General well-being means that they can relax more quickly. There has been a marked increase in fitness." ⁸

Ottmar Hitzfeld, record-breaking football trainer

"I think it is an ideal addition to the range offered by medical houses and orthopaedic distributors.

Especially because it brings the customers back into the shop on a regular basis so that you can form a real relationship. [...] Sometimes we combine the Airnergy treatment with a chiropody treatment to make the best use of the customer's time in our shop." **Axel Ruppert, proprietor of the Vital-Zentrum, Bad Soden-Salmünster and Schlüchtern**

Basis Plus

Professional Plus

Travel Plus „silver“

Avant Garde „cristal“

The Airnergy breathing devices

All Airnergy devices are convenient, light to transport and easy to care for. They are supplied with the necessary accessories and an easy-to-understand user manual.

There are several designs of energy device, which differ in their performance and appearance:

Basis Plus (2 Airnergy catalysts)

Professional Plus (4 Airnergy catalysts)

Travel Plus (4 Airnergy catalysts)

Avant Garde (4 Airnergy catalysts)

All four models are suitable for health prevention in younger and healthy people.

The higher the output of the Airnergy device, the quicker and more intensive the effect.

For chronic diseases, mood disorders or improving performance (for sportsmen, for corporate health prevention programmes etc.), we recommend the Professional Plus, Travel Plus or Avant Garde models.

This also applies to commercial uses.

The Professional Plus model.

For chronic diseases (e. g. degenerative eye diseases, cardiovascular and lung diseases, diabetes, Parkinson's) the Professional Plus should be used or a device with four catalysts, because these models are designed to provide the energy required for accelerated regeneration and cellular

protection as quickly and effectively as possible.

The Professional Plus is the model most frequently requested by customers.

A finance arrangement is possible e. g. by leasing or renting. For more information and sample calculations see the Airnergy datasheets.

Or call us and enquire:

The proof of the pudding is in the eating.

+49 (0) 2242-9330-0. We will be happy to advise you.

On request Airnergy will make special editions in your corporate design.

Your own Airnergy device?

... That might seem like an unaccustomed idea - a large sum of money - even if you consider how much costs will continue to increase in the health service and that you can lease the device. At the same time, though, it is not "solely" for one person. It can also be used for your partner's general well-being, for your son's burnout or for your grandchild's allergies.

It is therefore a facility for your immediate circle with low running costs (electricity and water).

Airnergy Avant Garde

**Awarded with: Innovation Award of the Century (1912-2012),
Senses Wellness Award 2012, category "Innovation",
European Health & Spa Award 2010, category "Best Technical Product Innovation"**

When it also has to please your eye.

Often customers and interested people would ask us whether they could see the inner workings of an Airnergy device. They also said that they would be much more inclined to use Airnergy more often at home or in the office, if the traditional design looked a bit less "medical". Later on a few commercial customers told us the same thing. Their premises are more modern and design-oriented and so they could not decide whether to buy Airnergy because somehow your eyes are also part of the process.

And so in 2010 we produced our first "glass" device. A prototype that offers a view inside the filigree Airnergy technology and has a slightly futuristic look.

The result: Visitors who saw the prototype wanted to buy it and then asked us if we could also make it in different colours and materials.

Since then we have produced many individual variations based on the Airnergy design and delivered them to various countries.

For example the top and bottom part of the housing can also be made from different types of granite, marble or hardwood. The round crown can either be lacquered, veneered or even gilded (cf. photographs).

For one customer from the Middle East 4,400 fabulous Swarovski crystals were individually applied by hand.

The operating components and the stainless steel shock-absorbing feet can also be surface treated.

In 2010 the Avant Garde "cristal" model won an award for "Best technical product innovation". But also, the "blanc" and "noir" models belong to the standard range.

A delivery time of around 6 weeks must be allowed for customized models.

However, we are particularly pleased about the 1912-2012 Century Award from the specialist health and fitness magazine „Fitness Tribune“. This is an innovation prize that honours the Airnergy method, in particular as the most holistic source of regeneration of the last 100 years.

Because, for the first time, it is possible not only to bring about harmonisation within the cells but also regulation of the tissue outside the cells. Thus improved production of energy (ATP) throughout the body, ubiquitously (Latin = everywhere), allows for both preventative and also curative treatment – a method that can be universally and holistically applied, either as a basic therapy or to support and accompany clinical concepts or conventional medical interventions.

How to use

Energy devices are simple to use and user-friendly. Easy-to-understand operating instructions explain how to prepare Airnergy for use in a few simple steps.

As a rule the Airnergy breathing device is used to support the healing process. It is no substitute for visiting your doctor.

Simple to operate and look after.

The Airnergy breathing devices are simple to operate. Nevertheless, they come with detailed operating instructions. The device does not require any special care. There are no follow-on costs except for regularly changing the reasonably priced air filter after 50 hours of operation.

Treatment time.

Treatment time varies between 15 and 40 minutes depending upon the model of device and the physical constitution of the user.

A longer treatment time, e. g. with the Basis Plus device, cannot compensate for the output of the more powerful devices.

1. Service Check:

Only required after 6,000 treatments.

The first service check is required after 2,000 hours of operation. For example this means:

- For the Airnergy Professional Plus: 1. service check required after 6,000 x 20-minute treatments.
- For the Airnergy Basis Plus: 1. service check required after 3,000 x 40-minute treatments.

Information on the Internet

You will find important information, suggestions and news about Airnergy on the company's website:

For further advice, please feel free to contact us.

Friedrich von Schiller

Airnergy - knowing, doing, helping.

Why natural healing?
Why the Airnergy Spirovital method?

**"How are you?" "Oh,... not well... not well..."
"But apart from that?" "Good!"**

It has now been proven that, absurd as it is, how we think determines our reality. An example: At Schiller's autopsy the doctors were amazed that, in view of all his organic defects, he had not died long ago.

Today we understand better. The knowledge about the cause of life and death changes like the causes themselves. Bacteria were discovered and then penicillin to fight them. Thanks to immunology the age of the bacterium is now behind us. We are able to fight or even conquer things that come from outside, where the cause is evident. From a pathological point of view, the 21st century is more neuronal... That which is within, is hardly measurable and forms the background of everything, the culture medium for everything.

In medical terms we can only conceive it as a whole: psycho-neuro-endocrino-immunological regulation. And there it is one's nature in particular that helps. In other words - Schiller was happy and so he continued to live "despite everything".

Today more than 50% of all illnesses and deaths are chronic or degenerative.

The majority of these increasing civilization diseases related to complex control systems. They affect not only the individual cell but also the milieu between the cells and these have to be regulated. In many cases this is difficult for conventional medicine. It is the individual reaction of a chronically sick person, his/her control variability or rigidity, that determines the course of his/her illness. Here the main actors are the unconscious autonomic nervous system, the endocrine system, the immune system and the human psyche.

Without treating this systemic network, self-healing is often impossible - the main reason for people seeking out a natural healing modality such as the Airnergy method, with the air as a healing ingredient. The so called Spirovital therapy (Latin respirare = to breathe, vita = life) is a technological innovation to revitalize all cells via the breath. Do not forget that breathing is not just to do with the lungs, but even concerns the cells and tissue around the big toenail. That applies to all cells, whether in organs, bones, glands or fluids. This means that the Airnergy method is particularly suitable for using to remedy organic diseases and also functional disorders. In both cases it creates the conditions required for self-healing.

Our partners: Who is working where with Airnergy?...

The Airnergy company takes part in many collaborative ventures and promotional programmes to make the technology available to a wide public.

Airnergy Spirovital therapy. Where?

Today, there are many Airnergy energy treatment centres in different areas. In Germany e. g. the Eden clinic run by Klaus Eder in Oberstaufen, one of the medics for the national football team or at Physio Sports run by Klaus Breitung in the Mediapark clinic in Cologne. In Dr. med. Roger Eisen's practice in Bad Griesbach and in the naturopathic practice of naturopath Roland Tennie in Essen. In the private clinic for aesthetic surgery, in Cologne or in the Doris Röhrig Cosmetic Institute in Cologne, in the Lady Fitnessstudio in Augsburg or in the wellness area of the Ostsee thermal spring in Usedom or in the Ruppert health centre in Schlüchtern.

You will find the addresses of more than 1,000 energy stations in Germany by searching the providers on our website: www.airnergy.com

Airnergy for general prevention.

Frequent drivers and flyers can benefit from the energy technology as can stressed managers. Various large companies are installing Airnergy for corporate health prevention both for the employees and the senior management.

Enhanced safety on the roads and in motorsports.

As a health and safety partner Airnergy is committed where it matters: Due to its effects upon physical performance and recovery, Airnergy can help to improve concentration and thereby contribute to safety on the roads and also in motor sports. And what applies to racing drivers also applies to lorry and frequent drivers.

Wellness Area in Burj al Arab.

One of the first Airnergy hotels in the world: The Burj al Arab (the World's first seven star hotel), supports the health and well-being of its guests with Airnergy Spirovital therapy. Airnergy is also to be found in numerous clinics, doctors' practices, natural health centres, wellness and beauty institutes and sporting associations. But above all there is a growing number of private users, who have their own device at home or in the office.

FAQs about Airnergy

These same questions are asked about Airnergy time and time again. Here are the answers.

Question: How is Airnergy used?

Answer: Depending upon the type of device and physical fitness, each treatment consists of breathing for 20 to 40 mins through a lightweight nasal cannula – relaxing in a seated or lying position, at a desk, whilst watching television, during fitness exercises or other activities.

Question: What are the risks and side-effects of breathing Airnergy?

Answer: When you breathe Airnergy you are inhaling air in its natural composition. You are not given highly concentrated amounts of oxygen or ozone or any foreign substances. That means: Airnergy breathing stimulates totally natural healing and regeneration processes in the body.³

Question: Does the Airnergy technology ionize oxygen or produce ozone?

Answer: No.

Question: How quickly do you feel the effects?

Answer: The subjective perception of the effects varies from person to person, depending upon individual health status and sensitivity. Objectively it is possible to measure the effects in each person after only one treatment.⁵

Question: Can you use Airnergy every day?

Answer: Yes. Environmental toxins, stress and unhealthy lifestyle place a burden on the body every day. It is therefore very helpful to support the body on a daily basis to deal with these stressors.

Question: Is there such a thing as habituation?

Answer: Yes, you get used to breathing Airnergy just like you get used to regular exercise or healthy eating.

Question: Can Airnergy be combined with other procedures?

Answer: Yes. With nearly all naturopathic and conventional medical applications.

Question: What are the operating costs after buying one's own Airnergy device?

Answer: The operating costs are limited to minimal costs for water and electricity. The air and bacterial filter has to be changed after every 50 hours of operation.

Question: Does 1 hour of breathing with the Basis Plus device achieve the same as 20 mins with the Professional Plus?

Answer: No. The difference in output cannot be completely offset by longer usage.

Regenerating and being healthy

The health and functional capacity of human beings is directly related to their body's own ability to utilize the oxygen in the air they breathe – the most important nutrient and medicine.

An apple that has been cut open: After a few minutes the contact with oxygen causes it to turn brown – to rust so to speak. In a similar way damage occurs in the cells of our bodies at every moment of our lives.

You can read on pages 7 and 9 how Airnergy supports the body's innate protection against this by improving oxygen utilization at a cellular level.

Curiosity keeps you young

We hope that you will have the confidence to try out something that your body has always known. The forces of nature are amazing but it is easy to forget until you re-experience them.

We hope that you are now curious and would like to know more about what Airnergy can do for you.

Simply call us – on +49 (0)2242-9330-0.

Or visit our website: www.airnergy.com.

We look forward to your visit and wish you happy breathing!

Everything is going to be all right.

Tested and certified

Airnergy AG is certified as a manufacturer of medical devices in accordance with DIN EN ISO 13485 and in accordance with quality management standard DIN EN ISO 9001 and environmental standard DIN EN ISO 14001 (Ecocert). In addition to this Airnergy is a member of the International Prevention Organisation e. V. (IPO).

Awards

2012: Innovation Award of the Century (1912-2012)

2012: Senses Wellness Award, category "Innovation"

2010: European Health & Spa Award, category "Best Technical Product Innovation"
